

### WHAT IS SIP TRUNKING

SIP Trunking enables a business to aggregate their Voice and Data communications across their existing broadband connection. This eliminates the need for separate voice and data circuits. SIP Trunking increases efficiency while providing additional functionality and control over communications.

### WHY SIPTRUNKING?

Unlike traditional phone companies you are not forced to order phone lines in bundles of 23 or more when you may only require half as many. You never pay for more than what you need. With SIP Trunking there are no limits and there are no minimums.

### BENEFITS OF SIP TRUNKING

SERVICE ACTIVATED IN HOURS NOT WEEKS -With traditional telephone companies, circuit based facilities such as PRIs may take up to forty-five days to provision, while with SIP Trunks, the time is reduced to minutes. Most of our services can be enabled within 24 hours of ordering

INSTANT BUSINESS AND MARKET PLACE EXPANSION - Create a national or even global presence virtually overnight. SIP Trunking eliminates the need for you to purchase separate voice and data connections.

SIP TRUNKS HAVE NO GEOGRAPHIC LIMITATIONS - you can have a customer service staff that is dispersed across the country, or even in another country, and they can all receive calls that come in on your customer service number.

SIP TRUNKS ARE NOT INSTALLED ON SITE PHYSICALLY - Typically business uses only a fraction of their overall bandwidth for their data needs, leaving as much as 80% of their available bandwidth under utilized. IP Communications' SIP Trunks eliminate the need to have both data and voice circuits delivered to your business. We use your available bandwidth to deliver your voice communications without sacrificing reliability or quality.

### SIP TRUNKING FEATURES

- ANI and DNIS delivery
- Protocols (SIP, T.38, H323 and IAX)
- Fail-Over and Load Balance Routing
- Local Number Portability
- Fast Service Activation
- 24/7 Technical Support
